

If you want to advertise a network that the clients may reach via the tunnel. Just add this in the server config. Also to use internal name push the nameserver option. No routing entry need to be added at the clients. And also you can push DNS address to the client in the server conf just add

```
push "route 192.168.16.0 255.255.255.0"  
push "dhcp-option DNS 192.168.43.1"
```
